

TÜV® certification for the data transmission concept used in SRS-Management's Digital Pen solution

The independent security experts of TÜV Informationstechnik GmbH (a TÜV NORD company) have put the *data transfer concept of SRS PaperDynamix®* through its paces. **Their opinion:** the concept guarantees the integrity and confidentiality of all data transmitted between the SRS Digital Pen and the associated IT systems.

Bensheim, April 10, 2008. Users of SRS-Management's Digital Pen can rest assured: the data from their handwritten notes will be transmitted to the relevant back-end systems without any loss of integrity or confidentiality. The data remains authentic, confidential and complete – and any manipulation can be detected.

In an independent security analysis commissioned by SRS-Management GmbH, TÜViT searched for serious weaknesses in the concept that would threaten the integrity, completeness and confidentiality of the data transferred. In its appraisal, TÜViT stressed that the concept harbored no data transmission risks that weigh against using the *SRS PaperDynamix®* Digital Pen solution.

"We were very pleased – though not surprised – at the outcome," says SRS Managing Director Detlev Homilius. "It strengthens our position and demonstrates once again that we are ahead of the competition with our *SRS PaperDynamix®* solution." In his opinion, quality is a must for SRS-Management, and that includes providing the highest possible level of data security. "That's why, from the very outset, we took every possible precaution as regards both data storage and encryption and the unambiguous identification of all communication partners."

About SRS-Management and *SRS PaperDynamix®*

Headquartered in Bensheim, Germany, SRS-Management GmbH is a system house for mobile corporate solutions. The company's core competence lies in optimizing business processes involving the capture of handwritten data with its product *SRS PaperDynamix®*. This solution allows handwritten information to be made available in IT systems much faster than previously possible – in a direct, secure and transparent manner and based on open standards. Users profit from greater efficiency without having to change the way they work; they can continue to use their accustomed forms – together with an SRS Digital Pen.

The paper form has been completely reinvented, and now functions as a direct digital link. Media discontinuity is a thing of the past, errors can be avoided and processes accelerated – a saving of up to 70 percent can be made on processing costs alone. Data is no longer lost, and changes can be documented immediately, clearly and permanently.

SRS-Management has the very best **references** – across all branches of industry in Europe. The company's list of clients includes Fraunhofer-Institute for Surface Engineering and Thin Films (Germany), Basel University Hospital (Switzerland), Werner & Pfleiderer (Germany) and Viking Lifesaving (Denmark). They, and many others, place their trust in *SRS PaperDynamix®*.

About TÜViT

As a "trust provider" for IT security and quality, TÜViT specializes in assessing, testing and certifying all kinds of IT products, systems and processes and ensuring that the relevant standards, laws and guidelines are complied with (e-compliance).

TÜViT has been fully accredited by a variety of German and international organizations and authorities in the fields of IT security and IT quality. These accreditations, which represent recognition by a higher authority of TÜViT's professional competence as a technical inspection agency, are confirmed through regular audits.

TÜV Informationstechnik GmbH (TÜViT) is a specialist in the area of information and communication technology.
